

In the Claims

Sub
D1
1. (Amended) An apparatus, comprising:
a base;
a device connected to the base; and
a cover including a plastic body and at least one electrically conductive lead, wherein the body is connected to the base such that the device is enclosed by the body, and wherein the electrically conductive lead includes an exposed portion electrically connected to the device.

Sub
B2
14. (Amended) An apparatus, comprising:
a base;
a device connected to the base;
a cover including a plastic body and at least one electrically conductive lead, wherein the body is connected to the base such that the device is enclosed by the body such that an inner surface of the body of the cover and an upper surface of the device define an air gap therebetween, and wherein the electrically conductive lead includes an exposed portion; and
an electrically conductive bump electrically connected between the device and the exposed portion of the electrically conductive lead.
